PROFESSIONAL SUMMARY

MSc Artificial Intelligence graduate with 3 years of production monitoring experience within the banking sector. Skilled in applying end-to-end data science and machine learning techniques to solve complex business problems, with hands-on experience in anomaly detection, time-series forecasting, and image classification. Passionate about using data and AI solutions to solve real-world problems and deliver meaningful insights.

CORE SKILLS

- AI & Machine Learning:** Anomaly Detection, Time-Series Analysis, Autoencoders, Statistical Analysis, TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas, MLOps fundamentals
- Programming:** Python, JavaScript, SQL
- Monitoring & Testing:** Dynatrace (APM, OneAgent, Root Cause Analysis), AppDynamics, log Analysis, Incident Management, JIRA, ServiceNow
- Collaboration & Soft Skills:** Cross-functional Collaboration, Client Communication, Mentoring, Critical Thinking, Problem Solving

KEY PROJECTS

Time Series Anomaly Detection 03/2026 – Present

- Problem Statement:** To study time-series anomaly detection techniques for identifying abnormal patterns in sequential data, such as network traffic, building on prior research experience in anomaly detection.
- Techniques Used:** Researching statistical and deep learning approaches, including moving averages, ARIMA, LSTM-based autoencoders, and reconstruction-error methods, with a focus on data preprocessing, windowing, and model evaluation for sequential anomaly detection.

IndoFashion Image Classification 08/2025 – 12/2025

- Problem Statement:** Developed a multi-class image classification solution from the IndoFashion dataset, addressing challenges of limited per-class training data and class similarity.
- Techniques Used:** Implemented a transfer learning approach using TensorFlow with MobileNetV2, combined with stratified sampling, augmentation, and a two-phase training strategy.
- Results Achieved:** Achieved ~78% test accuracy, outperforming ResNet50 (61%), with faster training time and better generalisation across most classes.

Anomaly Detection using GANs 04/2024 – 10/2024

- Problem Statement:** Evaluated the effectiveness of GANs for detecting anomalies in network traffic data, on the CICIDS 2017 dataset using PyTorch.
- Techniques Used:** Trained a GAN model with data preprocessing, class balancing, and dimensionality reduction using PCA. Applied stratified sampling and cross-validation for model evaluation, and benchmarked its performance against a CNN model for comparison.
- Results Achieved:** GANs faced stability and convergence issues when working with highly imbalanced and high-dimensional data. They also required longer training times and experienced model collapse compared to CNNs, showing the importance of choosing the right model based on the data and application.

WORK EXPERIENCE

Software Engineer | Quality Kiosk Technologies Pvt Ltd 12/2021 – 08/2023

- Worked on Application Performance Management (APM) using Dynatrace Managed for Axis Bank and IndusInd Bank.
- Reduced transaction failures by 30% through proactive monitoring of applications such as Net Banking, Mobile Banking, IMPS/UPI, Savings/FD, and Core Banking.
- Performed Root Cause Analysis (RCA) for live production issues, collaborating with application and synthetic monitoring teams to minimise user impact.
- Delivered performance insights and dashboards to senior technology and business stakeholders to support strategic decision-making.
- Recognised with the "Stellar Award" for identifying and resolving a critical issue in a high-pressure environment.

Associate – IT | Ruparel Realty India Pvt Ltd 11/2020 – 12/2021

- Handled BMC Remedy tickets for issue resolution and request tracking, ensuring timely closure and SLA compliance.
- Managed incidents and RCA reporting, and coordinated weekly meetings with Service Delivery Management teams.
- Documented issue resolutions and streamlined support workflows, improving internal team efficiency.

EDUCATION & CERTIFICATIONS

- Deloitte Data Analytics Virtual Experience Programme (Forage), 2026
- M.Sc. Artificial Intelligence with Business Strategy — Aston University, UK, 2025
- B.Sc. Information Technology — Mumbai University, India, 2020
